Little Spokane Water Bank
Approved Mitigation Area
December 4, 2017

The Approved Mitigation Area is the area where stream flow mitigation certificates are available under the first water right put into the Little Spokane Water Bank.

A mitigation certificate allows a new use of water in the Little Spokane Watershed (WRIA 55) that is not subject to restrictions found in WAC 173-555 (Little Spokane River Instream Flow Rule). Building permits issued within the Approved Mitigation Area are still subject to well setback requirements.
