EROSION & SEDIMENT CONTROL

GENERAL NOTES AND INFORMATION

1. No construction activity shall be performed during the wet season without the prior written approval of the appropriate agencies. The wet season is defined as the period of time when the daily falling precipitation is equal to or greater than the daily evaporation.

2. All construction activity shall be conducted in such a manner as to minimize the impact on the surrounding environment.

3. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing vegetation.

4. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing water bodies.

5. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing roadways.

6. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing buildings.

7. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing utilities.

8. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing arterial roads.

9. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing drainage systems.

10. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing stormwater management systems.

11. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing air quality.

12. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing noise levels.

13. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing traffic patterns.

14. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public safety.

15. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public health.

16. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public education.

17. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public recreation.

18. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public transportation.

19. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public utilities.

20. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public safety.

21. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public health.

22. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public education.

23. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public recreation.

24. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public transportation.

25. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public utilities.

26. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public safety.

27. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public health.

28. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public education.

29. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public recreation.

30. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public transportation.

31. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public utilities.

32. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public safety.

33. All construction activity shall be performed in such a manner as to minimize the disturbance of the existing public health.
