

# Review of September 2012 CARA Survey Input

May 14, 2013

Sarah Hubbard-Gray, HGC

# Consideration of CARA Survey

- Consider survey responses and committee input:
  - As technical tasks completed
  - When developing recommendations
  - At key points during CARA review
  - During committee discussions

# Updated CARA Needs

- Science related:
  - Base on sound science and engineering
  - Focus on water quality and protecting drinking water
  - Consider geographic areas with different soil and groundwater characteristics
  - Consider site specific requirements
  - Consider wastewater characteristics / loading
  - Consider a tiered approach with different allowances
  - Include flexibility for different development types

# Updated CARA Needs (Continued)

- Science and standard implementation related:
  - Consistency with other County and agency requirements
  - Be reasonable and logical, allow flexibility
  - Consider development and economic impacts
  - Consider long-term impacts

# Updated CARA Needs (Continued)

- Standard implementation related:
  - Consider specific uses that change over time
  - Consistent interpretation of requirements
  - Stringent enforcement
